2. The following is a statement of reasons for the indication of allowable subject matter: Claims 1 & 3-5, & 9 are towards a microfluidic device wherein among the recited limitations, includes a reservoir in communication with a retention member and configured to receive at least some of the first liquidic portion separated from the particles and a gate configured to open a channel downstream of the reservoir thereby decreasing the pressure within the reservoir so that at least some of the separated particles recombine with the subset of the first liquid portion separated from the particles.
3. Claim 9 is toward a microfluidic device wherein among the combination of limitations includes a reservoir in communication with the retention member configured so that a first liquidic portion of a particle-containing liquid sample received therein enters the reservoir along an entry path including a first surface of the retention member, and a gate having an open configuration wherein a subset of the first liquidic portion exits the reservoir along an exit path including the first surface of the retention member, wherein the entry path is substantially opposite the exit path.
